

## ***A leading light of environmental responsibility in the printing market, RISO FRANCE is an official partner of COP21.***

### **What is COP21?**

COP21 is the 21st edition of the world conference organized by the United Nations each year since 1995. A real symbol of enhanced worldwide awareness concerning the environment, it recognizes the existence of **human-induced climate change** and enjoins all the parties to face up to it. COP21 is to be held in Paris from 30th November to 11th December 2015.

### **RISO FRANCE, a partner of COP21: when performance becomes sustainable**

Strengthened by its commitment to sustainable development, RISO FRANCE has been **selected as a partner of COP21 to provide the equipment for the conference's copy center.**

It is above all for their **cold printing** technology that RISO production solutions attracted the organizers' attention for Paris 2015. Thanks to the productivity and reliability of RISO solutions, over 3 million copies can be made over the long working hours expected during the 12 days of the conference.

The COP21 copy center will be equipped with **8 RISO ComColor**, placed at the disposal of the organizers and participants. A RISO technical team will also be present throughout the event.

This means that the different **treaties and agreements** signed by the **key decision-makers worldwide**, together with the preparatory documents for the various committees, will be printed on environmentally friendly RISO equipment.

As an environmentally responsible company committed to protecting the climate, RISO shows its commitment and provides its backing for the United Nations Secretariat General in the form of corporate sponsorship.

Companies contribute to global warming, directly or indirectly. It is their duty to help to preserve the planet and ensure that their activities are not harmful for future generations. RISO assumes that responsibility.

### **Ecological technology**

Every year, RISO sets great store by innovation, to progress at technical and ecological levels alike. From product design to final use, RISO takes an overall approach through ecological production, cutting energy costs, recycling machines and consumables, etc.

The innovative FORCEJET™ technology, a unique cold printing process, makes RISO the market reference for **responsible printing.**

RISO inkjet technology provides high printing speeds, while remaining free of ozone emissions and reducing the electricity consumption of the equipment. This gives its solutions a small carbon footprint and makes them beneficial for users and their environment!
